

WE SET THE BENCHMARK!

Real Australian Made Quality!

Steel Pins are provided for holding your ramps in place.

A snug, firm fit to your deck.

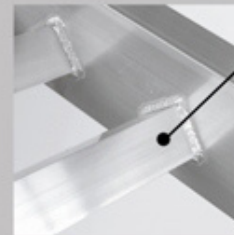

Unique treads give superior traction yet a smooth ride for Pneumatic Tyres.

MAYBE SAFETY IS YOUR BIGGEST CONCERN ... AND YOU KNOW WHAT'S GOOD FOR YOU WHEN YOU SEE IT!

For Steel or Rubber Tracks, our 'T Series' Treads are recommended.

PERHAPS YOU'RE A BIT LIKE US:- AS FUSSY AS YOUR CUSTOMERS!

Superior quality material is our strength. Specialised aluminium alloys also found in aircraft construction are used. Not only are these alloys stronger than regular aluminium, they are also harder.

YOU CAN'T AFFORD AN INJURED BACK!

On the ground, soles match the ramp angle giving you a sure footing.

- OF COURSE YOU WANT THESE ONES TO LAST LONGER. WHO WOULDN'T?

AFTER-ALL, MUCH OF YOUR LIVELIHOOD RIDES ON RAMPS!

WE KNOW (AND SO DO YOU) THAT **QUALITY CARRIES WEIGHT!**

THE ULTIMATE IS WITHIN EVERYONE'S REACH

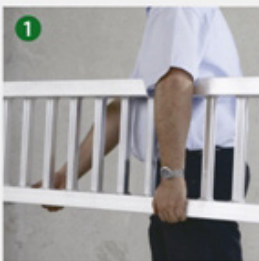

EXCAVATION

AGRICULTURE

LIGHT MACHINERY

1. OH&S needn't be a burden when you realise how light these ramps are. (Refer to specifications).
2. At our inception in the early 1980's, our designs were first tested and certified by a N.A.T.A. Laboratory with results beyond our expectations.
3. We call ourselves craftsmen. Attention to detail and pride in our work is foremost.
4. Our patrons are operators who feel confident and safe because they can sense the quality.

5. Standards mean so much to us. We test every ramp stile for strength before manufacture.
6. We compliment our reputation for excellence with our prompt despatch system.
7. As well as our extensive range of standard models, we also custom build to your requirements. Our Hinge system is one of several adaptations to our base design.
8. In whatever way we meet your requirements, your ramps will have their own catalogued serial number which allows us to track materials that comprise them.

WE'VE MADE IT ATTAINABLE TO YOU...
